

CEE 465 & CEWA 565

Data Analysis in Water Sciences

Lecture 15: Intro to SVD / EOF / PC

Nov. 24, 2020

- If you need a different presentation date, find someone to trade with!
- Students taking the class asynchronously have the option to pre-record their presentations

CEWA 565 Project Presentation Dates

Presentation Date	Project Group
Thursday, Dec 3rd	Caden Chamberlain, Anthony Stewart
	Shannon Cavanaugh, Jessica Steigerwald
	Yasmeen Mansour, Fanny Okaikue-Woodi
	Leigh Hamlet
	Hannah Besso, Eli McMeen
Tuesday, Dec 8th	Erik Dahl, Emily Iseley
	Craig Dittmann, Marek Kossik, Christian Vanderhoeven
	Ben Roberts, Zheng Luo
	Bareera Nadeem, Devin Robichaux*
	Sitao Liu, Zhuoran Li, Hongyi Yu*
Thursday, Dec 10th	Allan Cortina
	Kory Swabb
	Tara Okahara, Kori Chun
	Chang He, Will Wu
	*prerecorded presentations

See grading rubric:

Announcements

CEWA 565 Project Tips:

- Why should your audience care?
- What about your physical system of interest led you to choose the statistical test(s) you did?

Announcements

CEWA 565 Project Tips:

Your research questions have two parts

Real world, physical part: Based on your understanding of the world, your system, your data, what do you want to know? (This should help us better understand the world, or make better engineering decisions.)

Statistical part: This is where you choose a specific statistical test or analysis (or several) that you perform to try to provide objective insight into the first part.

Announcements

Today:

- Singular Value Decomposition (Lab 8-1)

Homework 7: Due Tuesday Dec. 1st, 10:30 AM (Pacific Time)

- Problem 1: MCMC (from module 7)
- Problem 2: SVD (from module 8)
- Problem 3: Statistics Synthesis (CEE 465)

Intro to Singular Value Decomposition (SVD), Empirical Orthogonal Functions (EOF), Principal Components (PC)

(applications oriented, less theory)

Yosemite National Park

In Standard Atmosphere, Temperature Decreases with Altitude

Average decrease = $6.5^{\circ}\text{C} / \text{km}$

(linear model, this is used for most snowmelt models)

Yosemite
temperature E
vs. elevation:
not always
linear or
related to
free
atmosphere!

Symbols are
different ground
temperature
sensors. Dashed
lines are from
balloon soundings.

Temperature Groups:

- West-slope
- Tuolumne
- East-slope

“Perfect” lapse rate

- Strong winds, directly perpendicular to range
- Usually cloudy, stormy trough
- Free atmosphere dominates, can neglect local topography

1 Jan 2004

Inversion

- High pressure/ridge
- Sinking air, weak winds
- Cannot define linear lapse rate
- Local topography most important

$$T_{\text{east}} < T_{\text{west}}$$

- Eastern slopes much colder than western

11 Feb 2004

$$T_{\text{east}} < T_{\text{west}}$$

- Eastern slopes much colder than western

We need a better statistical tool to help us quantify these spatial and temporal patterns.

Analysis Method:

Empirical Orthogonal Functions (EOF' s)

- Each EOF consists of a spatial weight (EOF) and a temporal weight, or principal component (PC)

- Spatial weights represent primary modes of variability over the study area

- Temporal weights explain how those modes change in time

Graphical Representation:

What are the primary directions of variability? Rotate the axis to match those directions.

Graphical Representation:

What are the primary directions of variability? Rotate the axis to match those directions.

Graphical Representation:

What are the primary directions of variability? Rotate the axis to match those directions.

Empirical Orthogonal Functions (EOF' s)

With mountain air temperature

Steps:

1. Arrange data into matrix
2. Remove mean from data
3. Singular Value Decomposition
4. Interpretation

SPACE M

$$\mathbf{X} = \begin{bmatrix} x_{1,1} & \dots & x_{1,N} \\ \dots & \dots & \dots \\ x_{M,1} & \dots & x_{M,N} \end{bmatrix}$$

$$\mathbf{X} = \begin{bmatrix} x_{1,1} & \dots & x_{1,N} \\ \dots & \dots & \dots \\ x_{M,1} & \dots & x_{M,N} \end{bmatrix}$$

$$\mathbf{X} = \begin{bmatrix} x_{1,1} & \dots & x_{1,N} \\ \dots & \dots & \dots \\ x_{M,1} & \dots & x_{M,N} \end{bmatrix}$$

Where $\mathbf{X} = \mathbf{X} - \bar{\mathbf{X}}$

$$\mathbf{X} = \begin{matrix} & \begin{matrix} \text{\textit{N}} \\ x_{1,1} & \dots & x_{1,N} \\ \vdots & \ddots & \vdots \\ x_{M,1} & \dots & x_{M,N} \end{matrix} \\ \begin{matrix} \text{\textit{M}} \\ \mathbf{X} \end{matrix} & \end{matrix}$$

Covariance of spatial locations with one another.
 “Dispersion matrix” with N, time, as the sampling dimension.

$$\mathbf{C} = \mathbf{X}\mathbf{X}^T = \begin{bmatrix} \text{\textit{N}} \\ \end{bmatrix}_M \begin{bmatrix} \text{\textit{M}} \\ \end{bmatrix}_N = \begin{bmatrix} \text{\textit{M}} \\ \end{bmatrix}_M$$

Covariance of different times with one another.
 “Dispersion matrix” with M, space, as the sampling dimension.

$$\mathbf{C} = \mathbf{X}^T\mathbf{X} = \begin{bmatrix} \text{\textit{M}} \\ \end{bmatrix}_N \begin{bmatrix} \text{\textit{N}} \\ \end{bmatrix}_M = \begin{bmatrix} \text{\textit{N}} \\ \end{bmatrix}_N$$

We want to solve for the eigenvectors ($\mathbf{v}$) and eigenvalues (λ) of our covariance matrices.

$$\mathbf{C}\mathbf{v} = \lambda\mathbf{v}$$

Steve Brunton, Singular Value Decomposition

Singular Value Decomposition (SVD) + Correlations

$\mathbf{X} = \begin{bmatrix} | & | & \dots & | \\ x_1 & x_2 & \dots & x_m \\ | & | & \dots & | \end{bmatrix} = \mathbf{U} \mathbf{\Sigma} \mathbf{V}^T = \begin{bmatrix} | & | & \dots & | \\ u_1 & u_2 & \dots & u_n \\ | & | & \dots & | \end{bmatrix} \begin{bmatrix} \sigma_1 & & & \\ & \sigma_2 & & \\ & & \ddots & \\ & & & 0 \end{bmatrix} \begin{bmatrix} - & - & - & - \\ v_1^T & v_2^T & \dots & v_m^T \\ - & - & - & - \end{bmatrix} = \hat{\mathbf{U}} \hat{\mathbf{\Sigma}} \hat{\mathbf{V}}^T$
 "economy SVD"

$x_k \in \mathbb{R}^n$
 $n \gg m$

$\mathbf{X}^T \mathbf{X} = \mathbf{V} \hat{\mathbf{\Sigma}} \underbrace{\hat{\mathbf{U}}^T \hat{\mathbf{U}}}_{\mathbf{I}} \hat{\mathbf{\Sigma}} \mathbf{V}^T = \mathbf{V} \hat{\mathbf{\Sigma}}^2 \mathbf{V}^T \Rightarrow \underbrace{\mathbf{X}^T \mathbf{X}}_{m \times m} \mathbf{V} = \mathbf{V} \hat{\mathbf{\Sigma}}^2$
 Eigenvectors (left), Eigenvalues (right)

$\mathbf{X} \mathbf{X}^T = \hat{\mathbf{U}} \hat{\mathbf{\Sigma}} \underbrace{\mathbf{V}^T \mathbf{V}}_{\mathbf{I}} \hat{\mathbf{\Sigma}} \hat{\mathbf{U}}^T = \hat{\mathbf{U}} \hat{\mathbf{\Sigma}}^2 \hat{\mathbf{U}}^T \Rightarrow \underbrace{\mathbf{X} \mathbf{X}^T}_n \hat{\mathbf{U}} = \hat{\mathbf{U}} \hat{\mathbf{\Sigma}}^2$
 Eigenvectors (left), Eigenvalues (right)

Correlation matrix

$\mathbf{X}^T \mathbf{X} = \begin{bmatrix} x_1^T x_1 & x_1^T x_2 & \dots & x_1^T x_m \\ x_2^T x_1 & x_2^T x_2 & \dots & x_2^T x_m \\ \vdots & \vdots & \ddots & \vdots \\ x_m^T x_1 & x_m^T x_2 & \dots & x_m^T x_m \end{bmatrix}$

$x_i^T x_j = \langle x_i, x_j \rangle$

if $\mathbf{X} = \hat{\mathbf{U}} \hat{\mathbf{\Sigma}} \hat{\mathbf{V}}^T$
 $\mathbf{X}^T = \hat{\mathbf{V}} \hat{\mathbf{\Sigma}}^T \hat{\mathbf{U}}^T$

<https://www.youtube.com/playlist?list=PLMrJAKhleNNSVjnsvigIFoY2nXildDCcv>

Singular Value Decomposition (SVD):

$$\mathbf{X} = \begin{bmatrix} x_{1,1} & \dots & x_{1,N} \\ \dots & \dots & \dots \\ x_{M,1} & \dots & x_{M,N} \end{bmatrix} = \mathbf{U}\mathbf{S}\mathbf{V}^T$$

In python:

```
U, S, V = scipy.linalg.svd(X)
```

Singular Value Decomposition (SVD):

$$\mathbf{X} = \begin{bmatrix} x_{1,1} & \dots & x_{1,N} \\ \dots & \dots & \dots \\ x_{M,1} & \dots & x_{M,N} \end{bmatrix} = \mathbf{U} \mathbf{S} \mathbf{V}^T = \begin{bmatrix} \dots & \dots & \dots \\ u_1 & \dots & u_M \\ \dots & \dots & \dots \end{bmatrix} \begin{bmatrix} s_1 & 0 & 0 \\ 0 & \dots & 0 \\ 0 & 0 & s_N \end{bmatrix} \begin{bmatrix} \dots & \dots & \dots \\ v_1 & \dots & v_N \\ \dots & \dots & \dots \end{bmatrix}^T$$

EOF's

- “Spatial eigenvectors” (MxM)
- Eigenvectors of $\mathbf{X}\mathbf{X}^T$
- (left singular values)

In python:

```
U, S, V = scipy.linalg.svd(X)
```

Singular Value Decomposition (SVD):

$$\mathbf{X} = \begin{bmatrix} x_{1,1} & \dots & x_{1,N} \\ \dots & \dots & \dots \\ x_{M,1} & \dots & x_{M,N} \end{bmatrix} = \mathbf{U} \mathbf{S} \mathbf{V}^T = \begin{bmatrix} \dots & \dots & \dots \\ u_1 & \dots & u_M \\ \dots & \dots & \dots \end{bmatrix} \begin{bmatrix} s_1 & 0 & 0 \\ 0 & \dots & 0 \\ 0 & 0 & s \end{bmatrix} \begin{bmatrix} \dots & \dots & \dots \\ v_1 & \dots & v_N \\ \dots & \dots & \dots \end{bmatrix}^T$$

EOF's

- “Spatial eigenvectors” (MxM)
- Eigenvectors of $\mathbf{X}\mathbf{X}^T$
- (left singular values)

PC's

- Principal Components (NxN)
- Eigenvectors of $\mathbf{X}^T\mathbf{X}$
- (right singular values)

In python:

```
U, S, V = scipy.linalg.svd(X)
```

Singular Value Decomposition (SVD):

$$\mathbf{X} = \begin{bmatrix} x_{1,1} & \dots & x_{1,N} \\ \dots & \dots & \dots \\ x_{M,1} & \dots & x_{M,N} \end{bmatrix} = \mathbf{U} \mathbf{S} \mathbf{V}^T = \begin{bmatrix} \dots & \dots & \dots \\ u_1 & \dots & u_M \\ \dots & \dots & \dots \end{bmatrix} \begin{bmatrix} s_1 & 0 & 0 \\ 0 & \dots & 0 \\ 0 & 0 & s_N \end{bmatrix} \begin{bmatrix} \dots & \dots & \dots \\ v_1 & \dots & v_N \\ \dots & \dots & \dots \end{bmatrix}^T$$

EOF's

- “Spatial eigenvectors” (MxM)
- Eigenvectors of $\mathbf{X}\mathbf{X}^T$
- (left singular values)

PC's

- Principal Components (NxN)
- Eigenvectors of $\mathbf{X}^T\mathbf{X}$
- (right singular values)

Singular values

- Eigenvalues (MxN)
- How much variance is explained by each eigenvector

In python:

```
U, S, V = scipy.linalg.svd(X, full_matrices=False)
```

Spatial Weights (EOFs)

Temporal Weights (PCs)

Region-wide

(a) EOF 1, $R^2=76.6$

PC 1 (temporal weights)

(b) EOF 2, $R^2=7.5$

PC 2

East-vs-West

Spatial Weights (EOFs)

Cold air pools

Temporal Weights (PCs)

Reconstructing data from the top EOFs/PCs

$$\mathbf{X}' = \mathbf{U}' \mathbf{S}' \mathbf{V}'^T$$

$\mathbf{X}' =$

$\times$

S_1

S_2

$\times$

S_3

Use this information to map space and time separately:

- Use topography (DEM) to map spatial patterns (aspect, cold-air pools)
- Use readily available weather information to create timeseries of when and how much spatial patterns matter

Lab 8-1: SVD with Monthly Precip.

Homework 7, problem 2 (see “Module 8”): Air temperature observations in complex terrain
